Let P be a regular polyhedron in which each face has p edges and for which q faces meet at each vertex. Using Euler's formula prove that $\frac{1}{p} + \frac{1}{q} = \frac{1}{2} + \frac{1}{e}$:
3 Solution: Every edge in a polyhedron has two faces. Each face has p edges so fp is twice the total number of edges. So $fp = 2e$. Therefore $f = \frac{2e}{p}$.

Basic Topology - M.A.Armstrong

Many undergraduate students study math or majors that are related to math. Basic Topology by M.A. Armstrong is the perfect book for those students. Students love a book that is easy to read and provides lots of research and examples. They can read this book in their spare time, but it also might be listed as one of their textbooks.

In mathematics, general topology is the branch of topology that deals with the basic set-theoretic definitions and constructions used in topology. It is the foundation of most other branches of topology, including differential topology, geometric topology, and algebraic topology. Another name for general topology is point-set topology. The fundamental concepts in point-set topology are continuity, compactness, and connectedness: Continuous functions, intuitively, take nearby points to nearby poi
