Physics is a progressive science as scientists change their mind all the time, so don't be shock when a change is made. It is a good thing when they change their minds and find a better solution to explain our physical world.

Introduction to Physics

Precisely define the most fundamental measurable quantities in the universe (e.g., velocity, electric field, kinetic energy). The effort to find the most fundamental description of the universe is a quest that has historically always been a big part of physics, as can be seen in the comic image below. [What does fundamental mean?]

What is physics? (article) | Khan Academy

But physics is the foundation for all of the other sciences. When we think about chemistry, when we think about chemistry, which is at the end of the day interactions between atoms, those interactions are really physics-based interactions. So chemistry, chemistry is actually laid down on a foundation of physics.
