Motion control is widely used in all types of industries including packaging, assembly, textile, paper, printing, food processing, wood products, machinery, electronics and semiconductor manufacturing. Industrial motion control applications use specialized equipment and require system design and integration. To design such systems, engineers need to be familiar with industrial motion control products; be able to bring together control theory, kinematics, dynamics, electronics, simulation, programming and machine design; apply interdisciplinary knowledge; and deal with practical application issues. The book is intended to be an introduction to the topic for senior level undergraduate mechanical and electrical engineering students. It should also be resource for system design engineers, mechanical engineers, electrical engineers, project managers, industrial engineers, manufacturing engineers, product managers, field engineers, and programmers in industry.

What greater beauty is there than the beauty God has created? Animals reflect beauty because they are the way God has created them, and workout the way they were created to do so. This is the principle BeautyFlex(r) uses. BeautyFlex(r) enhances YOUR body. Unlike other popular forms of exercise, Wild Workout(r) strengthens and shapes the body safely, without stressing the joints, connective tissues, and spine. Resistance is determined not by the weights on the bar or the setting on the machine, but by the BeautyFlexers own ability and desire to maintain resistance in the muscles as they work. Thus, BeautyFlex(r) not only develops strength, power, and endurance, but develops the ability to express these qualities through harmonious movement and with athleti
